

LoadMan On-Board Scales

Everything You Need!

LoadMan® is the global leader in truck on-board weighing systems that include loadcell scale sensors, in-cab computer/displays, route communications, Load Manager Software and SpotLight™ Data Analysis and Reporting Software

...Let the Driver Drive™ while LoadMan manages the route and data.

LoadMan's on-board weighing solutions are unsurpassed for accuracy, ruggedness and dependability. Their global network of dealers provide dependable customer support and service. And their complete vertically integrated weight and data solutions include:

- Rugged loadcell scale sensors
- Precision electronics
- In-cab computer/displays to guide drivers
- Wireless connectivity
- GPS tracking with Google mapping
- Load Management Software that easily integrates with nearly any back office accounting software
- Asset Tracking
- And LoadMan SpotLight – our new data analysis and reporting software.

LoadMan has a 25-year track record in superior weighing solutions with more than 15,000 installations worldwide – all designed and manufactured in the USA.

Load Data Management, Analysis and Reporting Software

LoadMan offers a complete single source solution that integrates hardware, software, and the data analysis and reporting you need to turn the industry's most accurate load data into bottom line results.

LoadMan Load Manager Software is like having a supervisor in each truck with features like:

- GeoRouting eliminates route sheets
- GeoFencing automatically identifies loading and unloading locations

LoadMan Load Manager Software delivers real-time data to dispatchers and fleet managers

- GPS positioning for locating trucks, materials, and fleet assets like trailers and bins
- Google Mapping with real-time playback of routes traveled by each truck
- Tracking data by route, vehicle, truck, material and payload – all time stamped

JUST INTRODUCED!

LoadMan's Load Management Software is now Cloud-Based and have just introduced their new application called LoadMan SpotLight™. SpotLight will analyze and report your fleet's operational efficiency on a simple dashboard-like user interface.

It's all about the data.™

SpotLight automatically scans the thousands to millions of data records and instantly informs dispatchers, fleet managers and even sales reps the profitability and efficiency of a truck, driver, customer, load material, etc.

Plus, SpotLight has the intelligence to alert the user of any problem areas that need attention - 24/7.

For example, if a particular truck is getting overloaded (even once), SpotLight will draw immediate attention to the issue. On the other hand, if there is a truck that's consistently (or even intermittently) under loaded, SpotLight will display a yellow to red alert on the dashboard. The dashboard alert levels are user configurable with simple administrative settings.

Cloud Hosted Software

LoadMan's Load Manager Software is now hosted on LoadMan Servers, providing database storage, security and backup with 24/7 uninterrupted availability. Furthermore, you pick the device. LoadMan provides data analysis and reporting on virtually any browser enabled smart device (phone, tablet, laptop, PC).

About LoadMan

LoadMan's weighing solutions are developed in partnership with the industry's leading OEMs like McNeilus, Freightliner, Heil, Wayne Engineering, Scranton Manufacturing, Labrie and Curotto. Loadman is committed to continuous innovation that delivers competitive advantage to its customer base. The support staffs at LoadMan are always available to support you — in all 50 states of the U.S. and on five continents — for installation, training, calibration and service.
