LoadMan® LM400 with Route Assistant Application for Front Loaders

Creative Microsystems introduces *LoadMan LM400*, the next generation of its LoadMan weighing system for fork-based commercial refuse trucks.

A new touch-screen display, intuitive graphical user interface, enhanced construction and Route Assistant application makes the *LM400* an ideal in-cab companion for truck drivers who need to focus on driving and their routes.

The new *LM400* on-board computer offers all the same automation features as its predecessor and significantly increases productivity with its modern, intuitive design.

Easy-to-Use Graphical Design

The LM400 touch screen provides all the information a driver needs to understand the status of the weighing system.

The LM400 is designed to automatically detect, weigh and record all customer accounts using sophisticated GPS software.

Additional set-up menus allow administrators to program advanced functionality.

When the driver experiences a problem during the route, it's simple to record the issue without writing notes or notifying dispatch.
